James,

Here's at least the alternative study (2 of them actually).

**Subject:** NPDES Related Information

Hey folks,

We have contracted with Argonne National Laboratory to perform an environmental analysis for us. Part of that analysis includes whether it would be more beneficial to inject all produced water (or not).

I was told that when you approved the most recent NPDES permit (or perhaps a prior iteration) that an analysis was conducted to determine which reservoirs could handle injection of produced water, and which couldn't, thus leading us to where we are today, with some operators injecting and others discharging.

Could I get a copy of that study, please?

Also, it's been requested that the results from the produced water sampling I've conducted over the past two years be provided as reference data. To ensure the most accurate and complete information I'd like to request copies of the lab results (toxicity and chemical analysis) from 2012 to present. Please let me know if you can help me out with this.

Thanks in advance!

--

*Respectfully,*

*James Salmons*
